Empowering the Warfighter with Modernized AI and Data Centric Security for any Agency Hybrid Multi-Cloud Environment including Multi-Domain Operations

Jim Cosby
Chief Technology Officer
NetApp

Abstract:
Mission and warfighter data is constantly growing for Federal Agencies and is becoming more challenging to access, store, manage, and process in a timely and secure fashion. This challenge requires new methods and technologies to optimize data by reducing the footprint, cost, and time to manage. It also requires enhanced security controls against cyber-attack and must remain flexible to share data across multiple coalition partners. Join this session to learn how innovative Intelligent Data Infrastructure can integrate AI security, efficiency, and flexibility to enable dominate outcomes for the warfighter environment as well as Multi-Domain Operations (MDO) and Mission Partner Environments (MPE).
