

The dedicated Cybersecurity and Defense team at Carahsoft specializes in providing federal, state and local government agencies with a variety of solutions to secure their cyber ecosystem. Our trained and certified representatives have a thorough understanding of the government’s cyber requirements and mandates, allowing us to accurately match our cybersecurity portfolio with our customer’s specific needs.

Carahsoft has partnered with numerous technology providers to offer government entities proven, cost-effective protection for critical networks and digital information. These solutions, all of which are available via our GSA schedule, are categorized based off the five functions outlined on the most recent NIST Cybersecurity Framework. The Framework was established in response to **Presidential Executive Order (EO) 13636, Improving Critical Infrastructure Cybersecurity**, developed around existing standards, guidelines, and practices, for critical infrastructure organizations to better manage and reduce cybersecurity risk.

IDENTIFY	PROTECT	DETECT	RESPOND	RECOVER
 <p>Solutions that identify and inventory assets and vulnerabilities that reside on devices, applications and networks. They will help you gain an institutional understanding of what systems need to be protected and help to identify your current attack surface.</p>	 <p>Prevent or limit the impact of cyber-attacks through access control, data security, patch management and maintenance, and protective methods. These solutions help you protect various asset classes like workstations, network devices, software applications, networks, data, and users.</p>	 <p>These solutions will allow you to detect cybersecurity events and anomalies that occur within devices, applications, and networks. They can assess the potential impact of an event by, discovering anomalous activity, continuously monitor information assets, hunt for intrusions, and provide security analytics.</p>	 <p>Take action and respond once a cybersecurity event is detected. These solutions assist by eradicating intrusion footholds and assessing the damage caused by an attack.</p>	 <p>These solutions help you return to normal operations after an undesirable cybersecurity event by restoring capabilities, services that were impaired and documenting lessons learned.</p>

* See Reverse for more technology partners and information

IDENTIFY

 Detect, Investigate, & Respond to Cyber Threats	 Identify & Destroy Duplicated Data	 Identify & Defend Application Vulnerabilities	 Agentless IT, IoT & OT Device Visibility & Control	 Actionable Visibility Into True Network Boundary	 Identify New & Emerging Cyber Security Threats	 Global Leader in Information Security	 Cyber Threats Through Data Virtualization
 Identify, Manage, & Block Threats	 Rapidly Identify & Automatically Correct Vulnerabilities in Keys & Certificates						

PROTECT

 Protect the Sharing of Confidential Information	 Content Creation & Performance	 Inbound & Outbound Email Authentication	 Cyber Security & Content Delivery Platform	 Revolutionary Endpoint Security Software	 Secure Mobility Platform	 Secure Remote Access Software for Privileged Users	 Web Browser Protection
 Protect Identities Within Your Network	 Cloud Asset Protection	 Protects & Manages Access for Privileged Users	 Physical Data Encryption Solution	 Global Leader in Information Security	 Application Delivery & Security	 API Security Management	 Identity & Access Management Platform
 Protect Sensitive Data With Key Orchestration	 Virtualization Security, Compliance & Control	 Identity Access Management	 Database & Web Application Firewall Solution	 Protect Critical Infrastructure Against a Wide Range of DNS Attacks	 Protect Sensitive Data with File Encryption	 Protect Data With Encrypted Secure USB Flash Drives	 Security for Your Operations, Applications, Identity, & Data
 Advanced DDoS Protection	 Protect Identities With Single Sign-On to Any Application	 Protection for Critical Infrastructure & IoT	 Next Generation Security Platform	 Physical ID Protection & Access	 Intelligence Driven Security Solutions	 Data Protection & Software Monetization Solutions	 Continuous Security for Application & Lifecycle Management
 Cloud Access Security Broker	 Protect Credentials & Data	 Critical Infrastructure & Communications Platform	 Data Security Compliance	 Layered Content Security for Mobile Devices, Endpoints, Gateways, Servers, & Cloud	 Protect IoT Devices	 Secure, Policy-Based Access to the Internet	

DETECT

 Targeted Cyber Attack Detection & Response	 User Behavior Monitoring	 Detect, Analyze, & Respond to Modern Cyber Threats	 Targeted Cyber Attack Detection & Response	 Intelligent Visibility Solutions	 Predictive Security Infrastructure Protection	 Fraud Detection & Call Center Authentication	 Reducing Your Attack Surface & Protecting the Data you Create
 Continuously Monitor & Detect Vulnerabilities	 Use Behavior Analytics	 Platform for Machine Data	 Detecting Change in an IT Environment & Providing Remediation	 Detect Vulnerabilities & Anomalous Behavior Within Databases			

RESPOND

 Cyber Incident Response	 Automated Security Operations Management Platform
--	--

RECOVER

 Intelligence-Driven Security Solutions From the Very Beginning
