

Forget More with Less, Let Robots Do the Work

Scott Jackson

Senior Manager

UiPath

Robotic Process Automation (RPA) is being used across government. Do you know what it is -- and what it's not?

We'll share the myths and the truths of what RPA can do and we'll look at real examples of RPA solving practical problems. Together, we'll explore how the art of the possible is here today with Document Understanding, AI/ML Processes, Object Detection, Data Collection & Dissemination, Cybersecurity, Testing and other automations. We'll conclude with a summary of the benefits that RPA delivers to military operations both in garrison and deployed/disconnected operations. You'll come out of this discussion understanding it all and able to apply RPA to your operations.
