

## **Artificial Intelligence – Enabling Faster and Better Decisions**

### **Jay Meil**

Chief Data Scientist and Research Fellow  
SAIC Artificial Intelligence Strategies & Solutions

Future wars will likely be decided in the realm of high-speed information networking. Artificial intelligence will enable rapid data processing, exploitation and dissemination of information to provide a faster sensor-to-shooter decision cycle, inherently collapsing the kill chain. In a near-peer fast fight the ability to respond at the “speed of relevance” is a competitive advantage. Leveraging machine intelligence to provide “signals in the noise” analytics, damage assessments and semantic reasoning will allow for faster and better decisions.

SAIC offers a suite of products and services that aim to amplify your mission by effectively transforming data into actionable intelligence. From ingest to inference, SAIC offerings provide an end-to-end solution that provides secure data management and artificial intelligent solutions for warfighters and intelligence analysts.
