

Generative AI

Tim Gillaspie

Solutions Architect

Empower AI

Empower AI will demonstrate the described process in this presentation and how it can impact the identified use cases, with a focus on a successful roadmap and the limitations and risks of Generative AI for DISA. Additionally, real-world implementations and the challenges for DISA using cybersecurity applications for illustration will be discussed. Finally, the foundation of Generative AI is based on quality data, so the presentation will also address the best practices that DISA can use, and the tools to train a language model like GPT-3, using DoD data. By doing so, DISA can leverage the power of generative AI to improve its operations, enhance cybersecurity, and better support the military's mission.
