

Composable Security Architecture/Extended Detection and Response

Chandra S. Pandey

Founder & CEO

Seceon

Seceon OTM Platform is built grounds up to "Modernizing Cybersecurity for Digital-Era". The platform ingests raw data like logs, flows, and identities from all the assets, applications, services, users, hosts, and processes and extracts 2000+ features, which are tracked by Machine Learning, AI, and Dynamic Threat Models to deliver:

- a. Comprehensive Visibility
- b. Proactive Detection of Threats and Breaches in the early stages of attacks so that the organization does not have to deal with successful data breaches and ransomware
- c. Auto and Playbook-based Remediation by applying policies and Firewalls, Gateways, Identity Management Systems, and End-Points to block, disable, and kill processes, coroutine files, and infected hosts.
- d. Continuous Compliance, Business Intelligence, Reporting, Threat Hunting, and Forensic analysis made possible for novices by platform intelligence.

The platform makes "Comprehensive Cybersecurity for Digital-Era" a reality for SMBs and SMEs with disruptive innovations
